Re: Lemberger Superfund Sites

Dear Darryl and Annette:

The Lemberger Sites Remediation Group (LSRG) would like to meet with you at your earliest convenience to discuss the status of ongoing investigation and remediation efforts at the Lemberger Superfund Sites. Since our last meeting with you, the LSRG has filed the following documents:

- June 2006 Field Investigation of Bedrock Characteristics
- July 2007 Monitored Natural Attenuation Semiannual Status Report No. 1
- October 2007 LL Leachate Head Evaluation Report
- December 2007 Supplemental Workplan for Deep Monitoring Well Installation

We are anxious to discuss these deliverables with you. They were prepared as part of the LSRG's commitment to accurately understand the nature and extent of contamination at the Lemberger Superfund Sites and to implement effective remedial measures.

The LSRG wants to be able to properly and timely consider the results of the two-year monitored natural attenuation demonstration project that is currently underway and to evaluate appropriate long-term remedial approaches that may be suggested by that project. Accordingly, the LSRG would like to meet with EPA and WDNR in early 2008 to discuss the listed deliverables, to receive comments from the agencies, to discuss the implications of the work we've completed to date, and to consider the appropriate course going forward.

We'll be glad to meet with you at your convenience in Chicago or at a mutually convenient location in Wisconsin.

Thank you for your continued assistance and guidance in managing this matter. Please contact me with any questions.

Very truly yours,

FOLEY & LARDNER LLP
